If you have received this facsimile in error, please notify us immediately by telephone (collect), and return the original message to us at the above address via the U.S. Postal Service.

D-ACD-E025

The information from a received LCCN is placed in the Internet Address Status table for the Internet Router/Point as specified by the Originator Address Field In the Internet Header.

5 If the Internet Address can not be found in the recipient's Table, then this LCCN is ignored.

It should be noted that the LCCN restriction will affect the congestion in the net by restricting the internet that can be originated by the members of the net.

NET CONGESTION CONTROL NOTIFICATION (NCCN)

10 When a Net Controller wants to restrict traffic in a congested net, a NCCN is generated and sent to all members in the net. The NCCN restricts the transmission of specified precedence traffic within the net. The table of Figure 42 specifies the NCCN text.

The NCCN is addressed using the global Internet Address. Recipients of the NCCN adjust their message queues to enable/disable the processing of the precedence levels as specified in the NCCN. The NCCN ignores the originator address in the NCCN's Internet Header is not the designated Net Controller.

15

It should be noted that the NCCN will affect all internet traffic on the net. Internet Points that are members of the affected net are regulated by the NCCN.

20 INTERNET NODE QUERY MESSAGE

The Internet Node Query Message is sent to Internet Routers and Internet Points
